Foreword	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Abbreviations	6
5 Safety Risk Management	7
5.1 Decision support framework for risk management	7
5.2 Prescriptive safety or risk performance	8
5.3 Risk assessment in relation to project development	9
6 Risk	11
6.1 What is risk	11
6.2 Safety philosophy and risk criteria	11
6.3 Risk control strategy	11
6.4 ALARP	12
6.5 Ways to express risk to people	13
6.5.1 General	13
6.5.2 Risk contours (RC)	13
6.5.3 Risk transects (RT)	14
6.5.4 Individual risk (IR)	14
6.5.5 Potential loss of life (PLL)	14
6.5.6 Fatal accident rate (FAR)	14
6.5.7 Cost to avert a fatality (CAF)	14
6.5.8 F/N curves (FN)	14
6.6 Uncertainties in QRA	15
7 Methodologies	15
7.1 Main steps of risk assessment	15
7.2 Qualitative risk analysis	15
7.2.1 HAZID	15
7.2.2 Failure mode and effect analysis (FMEA)	17
7.2.3 Risk matrix	17
7.2.4 Bow-tie	18
7.2.5 HAZOP	19
7.2.6 SIL analysis	21
7.3 Quantitative analysis: consequence and impact assessment	21
7.3.1 Consequence assessment	21
7.3.2 Impact assessment	23
7.4 Quantitative analysis: frequency assessment	24
7.4.1 General	24
7.4.2 Failure data	24
7.4.3 Consensus data	25
7.4.4 FAULT tree	25
7.4.5 Event tree analysis (ETA)	25
7.4.6 Exceedance curves based on probabilistic simulations	25
7.5 Risk assessments (consequence*frequency)	26
7.5.1 Risk assessment tools	26
7.5.2 Ad hoc developed risk assessment tools	27
7.5.3 Proprietary risk assessment tools	27
8 Accident scenarios	28
8.1 Overview accident scenarios	28
8.2 LNG import facilities including SIMOPS	28
8.3 LNG export facilities	31
8.4 Chain of events following release scenarios	32

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#).

The committee responsible for this document is ISO/TC 67, *Materials, equipment and offshore structures for petroleum, petrochemical and natural gas industries*.
