	Page
<b>Foreword</b> .....	<b>v</b>
<b>1 Scope</b> .....	<b>1</b>
<b>2 Normative references</b> .....	<b>1</b>
<b>3 Terms, definitions, abbreviated terms and symbols</b> .....	<b>1</b>
3.1 Terms and definitions.....	1
3.2 Abbreviated terms.....	2
3.3 Symbols.....	3
<b>4 Design procedure</b> .....	<b>4</b>
4.1 General.....	4
4.2 Design lifetime.....	4
4.3 Causes of degradation.....	5
4.4 Design temperature.....	5
<b>5 Determination of long-term creep strain</b> .....	<b>5</b>
5.1 General.....	5
5.2 Extrapolation.....	6
5.3 Time-temperature superposition methods.....	6
5.4 Isochronous curves.....	7
5.5 Weathering, chemical and biological effects.....	7
<b>6 Determination of long-term strength</b> .....	<b>8</b>
6.1 Tensile strength.....	8
6.2 Reduction factors.....	8
6.3 Modes of degradation.....	8
<b>7 Creep rupture</b> .....	<b>9</b>
7.1 General.....	9
7.2 Measurement of creep rupture: conventional method.....	10
7.3 Curve fitting (conventional method).....	11
7.4 Curve fitting for time-temperature block shifting of rupture curves.....	13
7.5 Strain shifting and the stepped isothermal method.....	14
7.6 Extrapolation and definition of reduction factor or lifetime.....	15
7.7 Residual strength.....	16
7.8 Reporting of results.....	16
7.9 Procedure in the absence of sufficient data.....	16
<b>8 Installation damage</b> .....	<b>17</b>
8.1 General.....	17
8.2 Data recommended.....	17
8.3 Calculation of reduction factor.....	18
8.4 Procedure in the absence of direct data.....	18
8.4.1 General.....	18
8.4.2 Interpolation from measurements with different soils.....	18
8.4.3 Interpolation between products of the same product line.....	19
8.4.4 Laboratory damage tests.....	19
<b>9 Weathering, chemical and biological degradation</b> .....	<b>19</b>
9.1 General.....	19
9.2 Data recommended for assessment.....	20
9.3 Weathering.....	20
9.4 Chemical degradation.....	21
9.4.1 Causes of chemical degradation.....	21
9.4.2 Evidence from service experience.....	21
9.4.3 Accelerated chemical degradation tests.....	22
9.4.4 Oxidation of polyolefins.....	26
9.4.5 Hydrolysis of polyesters.....	27

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 221, *Geosynthetics*.

This first edition of ISO/TS 20432 cancels and replaces ISO/TR 20432:2007, which has been technically revised. It also incorporates the Technical Corrigendum ISO/TR 20432:2007/Cor 1:2008.

The main changes are as follows:

- Subclause 7.4 has been modified to further detail and clarify the fitting of linear regression curves to time-temperature block shifted creep-rupture test results.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
