Reaction-to-fire tests — Heat release, smoke production and mass loss rate —

Part 5:
Heat release rate (cone calorimeter method) and smoke production rate (dynamic measurement) under reduced oxygen atmospheres

Reference number

1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols	2
5 Principle	3
6 Apparatus	4
6.1 General.....	5
6.2 Heater and enclosure and chimney arrangement with cone calorimeter as per ISO 5660-1.....	5
6.2.1 Enclosure.....	5
6.3 Water-cooling for weighing device.....	6
6.4 Chimney.....	6
6.5 Air- and gas-supply system.....	7
6.6 Enclosure oxygen analyser.....	7
6.7 Data collection and analysis system.....	7
7 Suitability of product for testing	7
8 Specimen construction and preparation	7
9 Test environment	7
10 Calibration	8
10.1 Operating calibrations.....	8
10.1.1 Enclosure oxygen analyser.....	8
10.1.2 Enclosure flow rate measurement.....	8
10.1.3 Heater calibration.....	8
11 Test procedure	8
11.1 General precautions.....	8
11.2 Initial preparation.....	8
11.3 Procedure.....	8
11.4 Criteria to consider a test as successful.....	10
12 Calculations	11
12.1 General.....	11
12.2 Calibration constant for oxygen consumption analysis.....	11
12.3 Correct time delay.....	11
12.4 Heat release rate.....	11
13 Test report	13
Annex A (informative) Commentary and guidance notes for operators	17
Annex B (informative) Additional information for using the linked configuration	18
Annex C (informative) Additional information for using the enclosure as standalone device with ISO 13927 controls	19
Annex D (informative) Gas flow rates	20
Bibliography	23

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 92, *Fire safety*, Subcommittee SC 1, *Fire initiation and growth*.

A list of all parts in the ISO 5660 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
