American National Standard

An American National Standard implies a consensus of those substantially concerned with its scope and provisions. An American National Standard is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American National Standard does not in any respect preclude anyone, whether or not he or she has approved the standard, from manufacturing, marketing, purchasing, or using products, processes or procedures not conforming to the standard. American National Standards are subject to periodic review and users are cautioned to obtain the latest editions.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard no later than five years from the date of publication. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword

(This introduction is not a normative part of ANSI Z136.3-2011, American National Standard for Safe Use of Lasers in Health Care.)

In 1968, the American National Standards Institute (ANSI) approved the initiation of the Safe Use of Lasers Standards Project under the sponsorship of the Telephone Group.

Prior to 1985, Z136 standards were developed by ANSI Committee Z136 and submitted for approval and issuance as ANSI Z136 standards. Since 1985, Z136 standards are developed by the ANSI Accredited Standards Committee (ASC) Z136 for Safe Use of Lasers. A copy of the procedures for development of these standards can be obtained from the secretariat, Laser Institute of America, 13501 Ingenuity Drive, Suite 128, Orlando, FL 32826 or viewed at www.z136.org.

The present scope of ASC Z136 is to protect against hazards associated with the use of lasers and optically radiating diodes.

ASC Z136 is responsible for the development and maintenance of this standard. In addition to the consensus body, ASC Z136 is composed of standards subcommittees (SSC) and technical subcommittees (TSC) involved in Z136 standards development and an editorial working group (EWG). At the time of this printing, the following standards and technical subcommittees were active:

- **SSC-1** Safe Use of Lasers (parent document)
- **SSC-2** Safe Use of Lasers and LEDs in Telecommunications Applications
- **SSC-3** Safe Use of Lasers in Health Care
- **SSC-4** Measurements and Instrumentation
- **SSC-5** Safe Use of Lasers in Educational Institutions
- **SSC-6** Safe Use of Lasers Outdoors
- **SSC-7** Eyewear and Protective Barriers
- **SSC-8** Safe Use of Lasers in Research, Development, and Testing
- **SSC-9** Safe Use of Lasers in Manufacturing Environments
- **SSC-10** Safe Use of Lasers in Entertainment, Displays, and Exhibitions

- **TSC-1** Biological Effects and Medical Surveillance
- **TSC-2** Hazard Evaluation and Classification
- **TSC-4** Control Measures and Training
- **TSC-5** Non-Beam Hazards
- **TSC-7** Analysis and Applications

- **EWG** Editorial Working Group
The six standards currently issued are:

This American National Standard is intended to ensure the safe use of lasers in health care, and has been published as part of the ANSI Z136 series of laser safety standards. The base document of the series is the *American National Standard for Safe Use of Lasers*, ANSI Z136.1. The procedures and methodologies described in this standard are based on requirements previously established in ANSI Z136.1 and are intended to give more specific processes for accomplishing laser safety in health care. The purpose of this standard is to provide more specific user processes for accomplishing laser safety protecting anyone who might become exposed during laser use for health care. It provides guidance to personnel who are using lasers and institutions where health care lasers are used. It should be recognized that the scope of ANSI Z136.3 includes all circumstances when people may be exposed to a laser when they are being used for health care applications, where laser systems as medical devices are used for diagnosis of disease, or for preventive, aesthetic, or therapeutic purpose, where bodily structure or function is altered, symptoms are relieved, or any health care application, where a laser is applied by people for health care purposes. This standard includes policies and procedures to ensure laser safety in any area where a health care laser system, as a medical device, is being used, including hospital facilities, non-hospital facilities, outpatient facilities, individual medical, dental and veterinarian offices, and non-medical locations, such as salons and spas.

In general, this standard may be used independently of ANSI Z136.1; however, instances where additional guidance contained in ANSI Z136.1 is required are noted in the text of this document. The body of this
standard is normative and applies to all health care laser use. The appendices are informative providing examples and discipline specific supplementary information.

It is expected that this standard will be periodically revised as new information and experience in the use of lasers are gained. Future revisions may have modified content and use of the most current document is highly recommended.

While there is considerable compatibility among existing laser safety standards, some requirements differ among federal, state and international standards and regulations. These differences may have an effect on the particulars of the applicable control measures.

Occasionally questions may arise regarding the meaning or intent of portions of this standard as it relates to specific applications. When the need for an interpretation is brought to the attention of the secretariat, the secretariat will initiate action to prepare an appropriate response. Since ANSI Z136 standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, the secretariat is not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration. Requests for interpretations and suggestions for improvements of the standard are welcome. They should be sent to ASC Z136 Secretariat, Laser Institute of America, 13501 Ingenuity Drive, Suite 128, Orlando, FL 32826.

This standard was processed and approved for submittal to ANSI by ASC Z136. Committee approval of the standard does not necessarily imply that all members voted for its approval.

Robert Thomas, Committee Chair
Sheldon Zimmerman, Committee Vice-Chair
Ben Edwards, Committee Secretary
Notice

(This notice is not a normative part of ANSI Z136.3-2011, American National Standard for Safe Use of Lasers in Health Care.)

Z136 standards and recommended practices are developed through a consensus standards development process approved by the American National Standards Institute. The process brings together volunteers representing varied viewpoints and interests to achieve consensus on laser safety related issues. As secretariat to ASC Z136, the Laser Institute of America (LIA) administers the process and provides financial and clerical support to the committee.

The LIA and its directors, officers, employees, members, affiliates, and sponsors, expressly disclaim liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance on this document or these standards. The LIA’s service as secretariat does not constitute, and LIA does not make any endorsement, warranty, or referral of any particular standards, practices, goods, or services that may be referenced in this document. The LIA also makes no guarantee or warranty as to the accuracy or completeness of any information published herein. The LIA has no power, nor does it undertake to police or enforce compliance with the contents of this document.

In issuing and making this document available, the LIA is not undertaking to render professional or other services for or on behalf of any person or entity. Nor is the LIA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.
**Participants**  
At the time it approved this standard, ASC Z136 had the following members:
