

## **ANSI/NACE/SSPC Standard Practice**

### **Industrial Coating and Lining Application Specialist Qualification and Certification**

This NACE International/SSPC: The Society for Protective Coatings joint standard for qualifying and certifying industrial coating and lining application specialists represents a consensus of those individual members who have reviewed this document, its scope, and provisions. Its acceptance does not in any respect preclude anyone, whether he or she has adopted the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not in conformance with this standard practice. Nothing contained in this NACE/SSPC standard is to be construed as granting any right, by implication or otherwise, to manufacture, sell, or use in connection with any method, apparatus, or product covered by letters patent, or as indemnifying or protecting anyone against liability for infringement of letters patent. This standard represents minimum requirements and should in no way be interpreted as a restriction on the use of better procedures or materials not discussed herein. Neither is this standard intended to apply in all cases relating to the subject. Unpredictable circumstances may negate the usefulness of this standard in specific instances. NACE and SSPC assume no responsibility for the interpretation or use of this standard by other parties, and accept responsibility for only those official NACE or SSPC interpretations issued by NACE or SSPC in accordance with their governing procedures and policies, which preclude the issuance of interpretations by individual volunteers.

Users of this NACE/SSPC standard are responsible for reviewing appropriate health, safety, and regulatory documents and for determining their applicability in relation to this standard prior to its use. This NACE/SSPC standard may not necessarily address all potential health and safety problems or environmental hazards associated with the use of materials, equipment, and/or operations detailed or referred to within this standard. Users of this NACE/SSPC standard also are responsible for establishing appropriate health, safety, and environmental protection practices, in consultation with appropriate regulatory authorities if necessary, to achieve compliance with any existing applicable regulatory requirements prior to the use of this standard.

CAUTIONARY NOTICE: NACE/SSPC joint surface preparation standards are subject to periodic review, and may be revised or withdrawn at any time in accordance with NACE/SSPC technical committee procedures. NACE and SSPC require that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of initial publication and subsequently from the date of each reaffirmation or revision. The user is cautioned to obtain the latest edition. Purchasers of NACE/SSPC standards may receive current information on all standards and other NACE/SSPC joint publications by contacting the organizations at the addresses below:

**ANSI/NACE No. 13/SSPC-ACS-1**

**Foreword**

This NACE/SSPC joint standard sets forth the requirements for qualification and certification of an industrial coating and lining application specialist, referred to hereafter as an *Application Specialist*. The qualification and certification process is a stepwise achievement process that includes all aspects of surface preparation and coating application for steel and concrete surfaces of complex industrial structures. The intended audience includes personnel involved in developing education and certification programs for the training and assessment of the skills and knowledge of an Application Specialist or assessing the training and certification programs available either on the open market or from an in-house source.

The body of the standard provides the requirements for qualification and certification of an Application Specialist.

Appendix A (mandatory) defines the competency requirements or the minimum “Body of Knowledge” for each qualification level that provides a basis to allow applicants to achieve qualification in a Certified Application Specialist Program. Appendix A provides requirements for Section 5 of this standard.

Appendix B (mandatory) describes the level of competency required for each qualification level. Appendix B provides required information for use with Appendix A for the development of a learning skills program associated with the Body of Knowledge in Appendix A.

Appendix C (nonmandatory) provides information on desirable workplace skills (reading text, document use, and numeracy) that should be considered by those attempting to both nurture and assess a candidate’s overall skills level.

Appendix D (nonmandatory) provides a list of acceptable training programs.

This standard may be used to validate or assess a candidate’s (e.g., an employee’s or potential employee’s) knowledge and skills level based on qualification in a certification program operated under this standard. One of the goals of this standard is to recognize and record in an outline format the minimum overarching elements in the Body of Knowledge as these elements relate to a candidate’s competency levels of learning and skills.

Government and industry are striving for long-term reliability of equipment and operations. Corrosion mitigation of steel and concrete structures by coatings and linings is relevant to achieving that goal. Coating application also combines corrosion mitigation with aesthetic appeal in both the public and private sectors. The success of coatings and linings is heavily dependent on the qualifications of the Application Specialist. The study “Corrosion Costs and Preventive Strategies in the United States”<sup>1</sup> identified an annual expenditure of 108.6 billion USD on protective coatings and linings. As much as 71% of that annual expenditure may be affected by work performed by an Application Specialist.

## ANSI/NACE No. 13/SSPC-ACS-1

This standard is designed to qualify the Application Specialist through a broad range of classroom instruction and associated work experiences.

This standard was originally published in 2007 and revised in 2016 by the joint Task Group (TG) 320, "Coating and Lining Applicator Qualification." TG 320 is administered by Specific Technology Group (STG) 04, "Coatings and Linings, Protective: Surface Preparation," and is composed of representatives from NACE International, The Society for Protective Coatings (SSPC), and the International Union of Paint and Allied Trades (IUPAT).<sup>(1)</sup> This standard is published under the auspices of NACE's STG 04 and SSPC's Coating Applicator Qualification Committee.

In NACE/SSPC standards, the terms *shall*, *must*, *should*, and *may* are used in accordance with Paragraph 2.2.1.8 of the Agreement Between NACE International and SSPC: The Society for Protective Coatings. The terms *shall* and *must* are used to state mandatory requirements. The term *should* is used to state something considered good and is recommended but is not mandatory. The term *may* is used to state something considered optional.

---

### Section 1: General

#### 1.1 Scope

1.1.1 This standard provides criteria for the education, training, experience, knowledge, and skills required of an Application Specialist to prepare and apply protective coatings. This standard may be used for certification of Application Specialists for other substrates or conditions, as considered appropriate by facility owners, contractors, or certifying agencies.

1.1.2 This standard applies to qualification of an Application Specialist. The qualification levels for Application Specialists are summarized in Section 4, Table 1.

---

### Section 2: Definitions

The definitions of many of the corrosion-related terms used in this standard can be found in NACE/ASTM<sup>(2)</sup> G193<sup>2</sup> or the "SSPC Protective Coatings Glossary."<sup>3</sup>

**Application Specialist:** An individual who engages in surface preparation and application of protective coatings and linings.

**Specialty Endorsements:** Advanced knowledge and demonstrated competency in specialty areas beyond the core Body of Knowledge.

---

### Section 3: Body of Knowledge

3.1 The basis for the qualification of an Application Specialist shall consist of:

3.1.1 Body of Knowledge, and

3.1.2 Test requirements.

3.2 The Body of Knowledge shall consist of:

3.2.1 A list of required areas of knowledge and skills; and

3.2.2 Required level of competency for each area of knowledge and skill.

3.3 The core areas of the Body of Knowledge include:

3.3.1 Environmental, safety, and health;

3.3.2 Process control;

3.3.3 Materials;
