Introduction

National Electrical Installation Standards™ (NEIS®) are designed to improve communication among specifiers, purchasers, and suppliers of electrical construction services. They define a minimum baseline of quality and workmanship for installing electrical products and systems. *NEIS* are intended to be referenced in contract documents for electrical construction projects. The following language is recommended:

Metal cable tray systems for power communications cabling shall be installed in accordance with NECA/NEMA 105, *Standard for Installing Metal Cable Tray Systems* (ANSI).

NECA/NEMA 105-2007 is an adoption of ANSI/NEMA VE 2-2006, *Metal Cable Tray Installation Guidelines*. The complete text of NEMA's publication is reproduced here, in this *National Electrical Installation Standard*.

Use of *NEIS* is voluntary, and neither the National Electrical Manufacturers Association, the Cable Tray Institute, nor the National Electrical Contractors Association assume any obligation or liability to users of this publication. Existence of a standard shall not preclude any member or non-member of these organizations from specifying or using alternate construction methods permitted by applicable regulations.

Everything in this publication is intended to comply with the edition of the National Electrical Code (NEC)® in effect at the time of publication. *NEIS* are not intended to duplicate NEC requirements. It is the responsibility of users of this standard to comply with state and local electrical codes when installing electrical products and systems.

This standard is also published as ANSI/NEMA VE 2-2006, *Metal Cable Tray Installation Guidelines*.

Suggestions for revisions and improvements to this standard are welcome. They should be addressed to:

NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

The National Electrical Manufacturers Association (NEMA) standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety-related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

Foreword

For Cable Tray Installers—This publication is intended as a practical guide for the proper installation of cable tray systems. Cable tray systems design shall comply with NEC Article 392, NEMA VE 1, and NEMA FG 1 and follow safe work practices as described in NFPA 70E.

These guidelines and information do not intend to cover all details or variations in cable tray systems nor provide for every possible installation contingency.

Construction Experience—It is recommended that the work described be performed by qualified persons familiar with standard electrical construction practices, electrical equipment, and safety of electrical wiring systems.

These guidelines will be useful to engineers, contractors, and maintenance personnel. This publication will be reviewed periodically with the purpose of updating it to reflect advancing technology and construction techniques. Please address any comments or questions to:

Vice President, Technical Services
National Electrical Manufacturers Association
1300 North 17th Street, Suite 1752
Rosslyn, VA 22209

This is the third edition of this publication.

This standards publication was developed by the NEMA Metal Cable Tray and Nonmetallic Cable Tray Sections. Section approval of the standard does not necessarily imply that all section members voted for its approval or participated in its development. At the time it was approved, the Metal Cable Tray and Nonmetallic Cable Tray Sections were composed of the following members:

Allied Tube & Conduit/Cope—Harvey, IL
Cablofil Inc—Mascoutah, IL
Champion Fiberglass—Spring, TX
Chalfant Manufacturing Company—Brunswick, OH
Cooper B-Line—Highland, IL
GS Metals Corporation—Pinckneyville, IL
MP Husky Corporation—Greenville, SC
P-W Industries, Inc.—Pico Rivera, CA
Thomas & Betts Corporation—Memphis, TN
The Wiremold/Legrand—West Hartford, CT

SCOPE

This publication addresses shipping, handling, storing, and installing cable tray systems. Information on maintenance and system modification is also provided.

Abbreviations used in this standard are as follows:

- "in." denotes inch;
- "ft" denotes foot;
- "lb" denotes pound;
- "mm" denotes millimeter;
- "kg" denotes kilogram;
- "m" denotes meter;
- "N" denotes newtons;
- "°F" denotes degree Fahrenheit;
- "°C" denotes degree Celsius.

Section 1 GENERAL

WARNING!—Do not use a cable tray as a walkway, ladder, or support for people; cable tray is a mechanical support system for cables and raceways. Using cable trays as walkways can cause personal injury and also damage cable tray and installed cables.

Hazardous voltages in electrical equipment can cause severe personal injury or death. Safety related work practices, as described in NFPA 70E, Part 11, should be followed at all times.

The performance of a cable tray wiring system is dependent on its proper installation, including supports and cables. Neglecting installation and maintenance guidelines may lead to personal injury as well as damage to property.

Installation and maintenance of cable tray wiring systems shall be conducted only by qualified personnel. For the purposes of this guideline, a qualified person is one who is familiar with electrical construction. In addition, the person is:

- Trained and authorized to test, energize, clear, ground, tag, and lock out circuits in accordance with established safety practices.

- Trained in the proper care and use of protective equipment such as insulated rubber gloves, hard hat, safety glasses or face shields, dust mask, and flash resistant clothing in accordance with established safety practices.
