

ANSI C12.1-2008

American National Standard
for Electric Meters

Code for Electricity Metering

Secretariat:

National Electrical Manufacturers Association

Approved June 27, 2008

American National Standards Institute, Inc.

NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

NEMA standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety-related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

AMERICAN NATIONAL STANDARD

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

Caution Notice: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

 3.6.1 Basic reference standards 12

 3.6.2 Transport standards 12

 3.7 Periodic verification of reference standards 12

 3.8 Portable/field/working standard watt-hour meters 12

 3.9 Performance records 12

 3.10 Performance requirements for standard watt-hour meters 13

 3.10.1 General test conditions 13

 3.10.2 Accuracy tests for portable and reference standards 13

4 Acceptable performance of new types of electricity metering devices and associated equipment 15

 4.1 General 15

 4.1.1 Acceptable metering devices 15

 4.1.2 Adequacy of testing laboratory 15

 4.1.3 Retesting of new meter type 15

 4.1.4 Test documentation 15

 4.1.5 Test device 15

 4.1.6 Tests performed in series 15

 4.1.7 Handling of failed device 15

 4.1.8 Restart testing 15

 4.1.9 Reporting of test metering devices 16

 4.2 Types of metering devices 16

 4.2.1 Basic type 16

 4.2.2 Variations within the basic type 16

 4.2.3 Type designation 16

 4.2.4 Acceptance of basic types in whole or part 16

 4.2.5 Minor variations 16

 4.2.6 Special types 16

 4.3 Specifications for design and construction 16

 4.3.1 Sealing 16

 4.3.2 Enclosures 16

 4.3.3 Terminals and markings 17

 4.3.4 Construction and workmanship 17

 4.3.5 Provision for adjustment 17

 4.4 Selection of metering devices for approval tests 17

4.4.1	Samples to be representative of the basic type.....	17
4.4.2	Number to be tested	17
4.5	Conditions of test	17
4.5.1	Tests to be applied.....	17
4.5.2	Configuration.....	17
4.5.3	Metering devices for special services	18
4.5.4	Metering devices of non-standard classes	18
4.5.5	Metering devices with wide voltage range.....	18
4.6	Rules governing the acceptance of types.....	18
4.6.1	Tolerances	18
4.6.2	Determination of Failure and Rejection	18
4.7	Performance requirements	19
4.7.1	Test conditions.....	19
4.7.2	Accuracy Tests—Internal Influences	21
4.7.3	Accuracy tests – external influences performance verification.....	36
5	Standards for in-service performance.....	54
5.1	Watt-hour meters and electronic registers	54
5.1.1	Purpose.....	54
5.1.2	Accuracy requirements	54
5.1.3	Tests	54
5.1.4	Performance tests.....	55
5.1.5	Determination of average percentage registration	56
5.2	Demand registers and pulse recorders	57
5.2.1	Accuracy requirements	57
5.3	Instrument transformers (magnetic).....	57
5.3.1	Pre-installation tests, (section 5. shall apply)	57
5.3.2	Instrument transformers removed from service.....	57
5.3.3	Performance tests.....	58
5.4	Coupling-capacitor voltage transformers	58
5.4.1	Performance tests.....	58
6	Auxiliary pulse devices for electricity metering	59
6.1	General	59
6.1.1	Information to be shown on pulse initiator	59
6.1.2	Information to be shown on pulse amplifier or relay	59
6.1.3	Information to be shown on pulse totalizers	59
6.2	Tests to be applied.....	59
6.3	Performance requirements	59
6.3.1	Test conditions.....	59
6.3.2	Initial conditions	60
6.3.3	Mechanical load	60
6.3.4	Insulation.....	60
6.3.5	Performance test.....	60
6.3.6	Sunlight interference test – pulse devices containing optical sensors	61

FOREWORD (This Foreword is not part of American National Standard C12.1-2008)

This version of C12.1 has been modified in several areas in an effort to respond to a changing industry and to improve the clarity of some of the tests. The changes, while not extensive, aim to improve the consistency of test procedures and improve the quality of the metering products. This standard continues to form the basic requirement for all kilowatthour metering instruments – both electronic and electromechanical. Another standard in this series, ANSI C12.20, provides different test tolerances and a few different tests that are required for higher accuracy metering devices.

Most of the meter specifications have been retained from the previous edition. Comments about the significant changes follow. To help insure that new electronic equipment is as dependable as possible, an oscillatory surge withstand test was added. Also, the requirement when retesting a new meter type was made more restrictive. Minor changes to the temperature rise test were made to make testing more uniform. Supplementary information was added to the equality of current circuits test, the electrostatic discharge test, and the relative humidity test to clarify the testing process. For several of the tests specific details for successful passing criteria have been included. References to external documents were updated.

The Secretariat of the Accredited Standards Committee on Electricity Metering, C12, is held by the National Electrical Manufacturers Association (NEMA) and the National Institute of Standards and Technology. At the time this standard was processed and approved, the C12 Committee had the following members:

Tom Nelson, Chairman
Paul Orr, Secretary

Organization Represented

Center for Neighborhood Technology

Electric Light & Power

Elster Electricity, LLC

EnerNex Corporation

Future DOS R&D Inc.

General Electric, Energy

Institute of Electrical and Electronics Engineers

Itron, Inc.

Landis+Gyr, Inc

Measurement Canada (Liaison No Vote)

Name of Representative

Lawrence Kotewa

Lauren Pananen
John McEvoy
Tim Morgan
D. Young Nguyen

Scott Weikel

Aaron Snyder

Avygdor Moise

Curt Crittenden

Richard Tucker
Herman Millican

ANSI C12.1-2008

National Institute of Standards And Technology	Tom Nelson
Public Service Electric & Gas	David Ellis
Schweitzer Engineering Labs	Bob Hughes
Underwriters Laboratory	Ron Breschini

The following members of the C12.1 Committee were actively involved in the revision of this standard:

S. Weikel, Chairman

M. Anderson	G. Mayfield
N. Balko	J. McEvoy
L. Barto	H. Millican
B. Cain	A. Moise
R. Collins	T. Morgan
B. Cook	T. Nelson
C. Crittenden	D. Nguyen
J. DeMars	V. Nguyen
L. Durante	D. Nordell
D. Ellis	L. Pananen
T. Everidge	C. Partridge
C. Gomez	A. Rashid
W. Hardy	A. Snyder
Bob Hughes	D. Tandon
Brent Hughes	A. Thompson
B. Kingham	J. Thurber
L. Kotewa	J. Voisine
T. Lawton	S. Weikel
R. Lokys	J. West
E. Malemezian	

In addition, the following comprised the Editorial Committee for the current Revision of C12.1:

- L. Barto
- E. Malemezian
- P. Orr
- A. Snyder
- S. Weikel

AMERICAN NATIONAL STANDARD

ANSI C12.1- 2008

Code For Electricity Metering

1 Scope and references

This Code establishes acceptable performance criteria for new types of ac watt-hour meters, demand meters, demand registers, pulse devices, and auxiliary devices. It describes acceptable in-service performance levels for meters and devices used in revenue metering. It also includes information on related subjects, such as recommended measurement standards, installation requirements, test methods, and test schedules. This Code for Electricity Metering is designed as a reference for those concerned with the art of electricity metering, such as utilities, manufacturers, and regulatory bodies.
