NOTICE AND DISCLAIMER
(ANSI Accredited Standards Committee)

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

ANSI standards, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. As Secretary of the ANSI Accredited Standards Committee, NEMA administers the process in accordance with the procedures of the American National Standards Institute to promote fairness in the development of consensus. As a publisher of this document, NEMA does not write the document and it does not independently test, evaluate or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property or other damages of any nature whatsoever, whether special, indirect, consequential or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, express or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer's or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity. Nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test or inspect products, designs or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety-related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

AMERICAN NATIONAL STANDARD

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

Caution Notice: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

FOREWORD

In 1912, a committee of the American Electrochemical Society recommended standard methods to be used in testing dry cells. Their recommendations were followed five years later when the National Bureau of Standards prepared specifications that included cell sizes, arrangement of cells within batteries, service tests, and required performance.

The need for continued revision to the specification led to the authorization by the American Engineering Standards committee of a permanent sectional committee on dry cells, now portable cells. This Committee, C18, representing battery users, manufacturers, and government agencies, has remained active since that time.

This standard is a revision of ANSI C18.2M, Part 1-2007 *American National Standard for Portable Rechargeable Cells and Batteries—General and Specifications*. This current revision seeks to improve upon previous editions of this standard by adding consumer product acceptance procedures such as clarification of rated capacity, cycle life, and application charge capacity. Harmonization with the other ANSI C18 Standards was implemented where applicable.

The basic philosophical approach used in developing this standard was that of setting forth uniform test procedures that permit manufacturers' self-declaration with regard to the performance levels of their products, or, in some cases, establishing minimum acceptable performance levels.

In April 1996, the then ANSI Accredited Standards Committee C18 on Specifications for Dry Cells and Batteries established a new general format for the publication of its standards, dividing this standard into two parts. Part 1 of this American National Standard for Portable Rechargeable Cells and Batteries contains two basic sections. The first section has general requirements and information, such as the scope, applicable definitions, general descriptions of battery dimensions, terminal requirements, marking requirements, general design conditions, test requirements, etc. Section 2 of Part 1 is comprised of specification sheets for various types of cells and batteries. Part 2 of the standard, a separate document, contains safety requirements.

Suggestions for the improvement of this standard will be welcome. They should be sent to:

**Senior Technical Director, Operations
National Electrical Manufacturers Association
1300 North 17th Street, Suite 900
Rosslyn, VA 22209.
Attention: Secretary ANSI ASC C18**

This standard was processed and approved for submittal to ANSI by the American National Standards Committee C18 on Portable Cells and Batteries. Committee approval of this standard does not necessarily imply that all committee members voted for its approval. When Committee C18 approved this standard, it had the following members:

Michael H. Babiak, Chairperson
Steven Wicelinski, Vice Chairperson
Andrei Moldoveanu, Secretary

Organization Represented:

Name of Representative:

BAE Systems

Andrew Markow

Bureau Veritas

David Grandin

Duracell

Steven Wicelinski
S. Keel Kelly (Alternate)

DeJager & Associates	James C. DeJager
Energizer Battery Manufacturing, Inc.	Michael H. Babiak Marcus K. Boolish (Alternate)
Fisher-Price Inc.	Douglas Golde
Intertek ETL Semko	Thomas O'Hara Rich Byczek (Alternate)
Kids II	Bob Coughlin
Panasonic Battery Corporation of America	Charles Monahan
Portable Power Consultants, LLC	Ramesh V. Shah
SGS North America	Jody Leber
Spectrum Brands Inc.	John Hadley Denis Carpenter (Alternate)
UL LLC	Laurie Florence
ZPower	Troy Renke

The members of Subcommittee C18-2 on Portable Rechargeable Batteries who contributed to the development of this standard are:

Ramesh V. Shah, Chairman

Michael H. Babiak, Vice Chairman
Andrei Moldoveanu, Secretary

Marcus Boolish	John Hadley
Denis Carpenter	Jody Leber
Bob Coughlin	S. Keel Kelly
James C. DeJager	Andrew Markow
Laurie Florence	Charles Monahan
Douglas Golde	Troy Renke
David Grandin	Steven Wicelinski

Others who contributed to the development of this document are:

Akio Furukawa	Battery Association of Japan
Kaniharu Iizuka	Battery Association of Japan
Koji Sekai	Battery Association of Japan

AMERICAN NATIONAL STANDARD

ANSI C18.2M, PART 1-2013

Portable Rechargeable Cells and Batteries— General and Specifications

1 General

Note: Part 1 does not include safety requirements, which can be found in Part 2.

1.1 Scope and objectives

1.1.1 Scope

This publication applies to portable rechargeable, or secondary, cells and batteries¹ based on the following electrochemical systems:

- a) Nickel-cadmium
- b) Nickel-metal hydride
- c) Lithium-ion including lithium ion polymer

Section 1 of this standard contains general information and all standardized performance and mechanical tests upon which all the specifications in Section 2 are based.

Section 2 specification sheets list those tests and requirements described herein that are required for each battery. Not all tests in Section 1 are necessarily required on every specification sheet.

Part 2 of this standard describes all safety tests and requirements.

1.1.2 Purpose

The purpose of this publication is:

- a) To ensure the electrical and physical interchangeability of products from different manufacturers;
- b) To minimize proliferation of cell and battery types;
- c) To define standard performance tests and provide guidance for their assessment; and,
- d) To provide guidance to consumers, manufacturers, designers, and other end users.

This is achieved by specifying designations, dimensions, polarity, terminals, markings, test conditions, and procedures.

1.2 Normative references

The following standards contain provisions that, through reference in this text, constitute provisions of this American National Standard. At the time of publication, the edition indicated was valid. All standards are subject to revision, and parties to agreements based on this American National Standard are encouraged to investigate the possibility of applying the most recent edition of the standard indicated below.

ANSI C18.2M, Part 2-2006 *Portable Rechargeable Cells and Batteries—Safety Standard*

¹ Unless otherwise noted, the word “battery” is used to refer to either cell or battery or both in the remainder of this document.
