NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

The National Electrical Manufacturers Association (NEMA) standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process and establishes rules to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, expressed or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guide.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health or safety-related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

FOREWORD

The NEMA Solid State Lighting Section has prepared this Standards Publication. The objective of this NEMA standard is to provide suggested minimum performance levels for SSL retrofit products. The retrofit market being the first market introduction for most consumers, it is critical that the products being offered meet a minimum standard for form, fit and function, so as to not disappoint or discourage market acceptance and growth. Federal programs such as Energy Star set high performance goals to encourage growth of such products, but do not provide minimum acceptance criteria for products as a whole. Dozens, even hundreds of standards exist for illumination technology, and many of these may be applied to SSL if an examination is first made to determine correct application. This document seeks to call out, tailor and consolidate these performance parameters as able, either by reference or direct quote.

In the preparation of this standards publication, input of users and other interested parties has been sought and evaluated. Inquiries, comments, and proposed or recommended revisions should be submitted to the concerned NEMA product Subdivision by contacting:

Vice President, Technical Services

1. GENERAL

1.1 SCOPE

This standards publication applies to integral Light Emitting Diode (LED) lamps, which are defined as a lamp with LEDs, an integrated LED driver, and a base that meets appropriate American National Standards (ANSs) and is designed to connect to the branch circuit via a lampholder/socket that meets appropriate ANSs. The criteria herein apply to both integral LED lamps of non-standard form, and those intended to replace standard general service incandescent lamps, decorative (candelabra style) lamps, and reflector lamps. Other types of replacement lamps may be added in the future as improvements to LED technology make LED use in other replacement lamp types viable.

1.2 REFERENCES

The following normative documents contain provisions, which through reference in this text constitute provisions of this standards publication. By reference herein these publications are adopted, in whole or in part as indicated, in this standards publication. These referenced documents are available from the organizations below. Integral LED lamps shall comply with the relevant clauses of the following standards, unless the requirements of this specification are more restrictive:

ANSI C78.20–2003 American National Standard for Electric Lamps – A, G, PS, and Similar Shapes with E26 Medium Screw Bases

ANSI C78.21–2011 American National Standard Electric Lamps – PAR and R Shapes

ANSI C78.24–2001 American National Standard for Electric Lamps – Two-inch (51 mm) Integral-reflector Lamps with Front Covers and GU5.3 or GX 5.3 Bases

ANSI C78.377-2008 Specifications for the Chromaticity of Solid State Lighting Products

ANSI C79.12002 American National Standard for Electric Lamps – Nomenclature for Glass Bulbs Intended for Use with Electric Lamps

ANSI/IEC C81.61-2003 American National Standard for Electric Lamp Bases

ANSI/IEEE C62.41–1991 Recommended Practice for Surge Voltages in Low-Voltage AC Power Circuits

CIE Publication No. 13.3 – 1995 Method of Measuring and Specifying Color Rendering of Light Sources

CIE Publication No. 18.2 – 1983 The Basis of Physical Photometry

IESNA LM-16–1993 Practical Guide to Colorimetry of Light Sources

IESNA LM-28–89 – 1989 Guide for the Selection, Care, and Use of Electrical Instruments in the Photometric Laboratory

IESNA LM-79–08 Electrical and Photometric Measurement of Solid State Lighting Products

IESNA LM-80-08 Approved Method for Measuring Lumen Maintenance of LED Light Sources

UL 1993–1999 Standard for Self-Ballasted Lamps and Lamp Adapters

UL 8750–2009 Light Emitting Diode (LED) Equipment for Use in Lighting Products Performance Characteristics Test Procedure
