AMERICAN NATIONAL STANDARD

STANDARD FOR  
CERTIFICATION OF  
ELECTRICAL TESTING TECHNICIANS

Secretariat  
**InterNational Electrical Testing  
Association**

Approved by  
**American National Standards Institute**

# American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

**Caution Notice:** This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

The following is a listing of all NETA Accredited Companies as of the date this document was approved by ANSI as an American National Standard, January 8, 2010.

A&F Electrical Testing, Inc.	Kevin Chilton
Advanced Testing Systems	D. Patrick MacCarthy
American Electrical Testing Co.	Scott A. Blizzard
Apparatus Testing and Engineering	James Lawler
Applied Engineering Concepts	Michel Castonguay
Burlington Electrical Testing Company, Inc.	Walter Cleary
C.E. Testing, Inc.	Mark Chapman
DYMAX Holdings, Inc.	Gene Philipp
Eastern High Voltage	Joseph Wilson
Electric Power Systems, Inc.	Steve Reed
Electrical and Electronic Controls	Michael Hughes
Electrical Energy Experts, Inc.	William Styer
Electrical Engineering Consulting & Testing, P.C.	Barry W. Tyndall
Electrical Equipment Upgrading, Inc.	Kevin Miller
Electrical Reliability Services	Lee Bigham
Electrical Testing Services	Frank Plonka
Electrical Testing, Inc.	Steve Dodd
Elemco Testing Co. Inc.	Robert J. White
ESCO Energy Services	Lynn Hamrick
Hampton Tedder Technical Services	Matt Tedder
Harford Electrical Testing Co., Inc.	Vincent Biondino
High Energy Electrical Testing, Inc.	James P. Ratshin
High Voltage Maintenance Corp.	Tom Nation
HMT, Inc.	John Pertgen
Industrial Electric Testing, Inc.	Gary Benzenberg
Infra-Red Building and Power Service	Thomas McDonald
M&L Power Systems Maintenance, Inc.	Darshan Arora
Magna Electric Corporation	Kerry Heid
Magna IV Engineering – Edmonton	Jereme Wentzell
Magna IV Engineering, Ltd. – BC	Cameron Hite
MET Electrical Testing Co., Inc.	William McKenzie

Nationwide Electrical Testing, Inc.  
North Central Electric, Inc.  
Northern Electrical Testing, Inc.  
Orbis Engineering Field Services, Ltd.  
Phasor Engineering  
Potomac Testing, Inc.  
Power & Generation Testing, Inc.  
Power Engineering Services, Inc.  
Power Plus Engineering, Inc.  
Power Products & Solutions, Inc.  
Power Services, Inc.  
Power Systems Testing Co.  
Power Test, Inc.  
Power Testing and Energization, Inc.  
Powertech Services, Inc.  
Precision Testing Group  
PRIT Service, Inc.  
Reuter & Hanney, Inc.  
REV Engineering, Ltd.  
Scott Testing, Inc.

## FOREWORD

(This Foreword is not part of American National Standard ANSI/NETA ETT-2010)

The InterNational Electrical Testing Association (NETA) was established in 1972 to establish uniform testing procedures for electrical equipment and apparatus. NETA developed specifications for the acceptance of new electrical apparatus prior to energization, the *ANSI/NETA Standard for Acceptance Testing Specifications for Electrical Power Equipment and Systems*, and for the maintenance of existing apparatus to determine its suitability to remain in service, the *ANSI/NETA Standard for Maintenance Testing Specifications for Electrical Power Distribution Equipment and Systems*.

In 1987, NETA recognized the need to establish a standard for technicians who perform electrical testing services. The Preface of *Standard for Certification of Electrical Testing Technicians* succinctly states the necessity of this document.

This standard was created to codify the experience, education, and training requirements necessary for an individual to obtain a level of competency as an electrical test technician. NETA carefully examines the qualifications of each NETA Accredited Company (NAC) in addition to certifying the individual technician employed by that NAC. Because of this requirement, another directive of this task group was to assure that the NETA requirements for certification were aligned with an alternate certification path for qualified individuals.

The participation of a wide variety of stakeholders during the review process contributed to the creation and acceptance of this document as an American National Standard.

*ANSI/NETA Standard for the Certification of Electrical Testing Technicians* was approved as an American National Standard by ANSI on March 15, 2000. On January 8, 2010 ANSI/NETA ETT-2010 was approved as a revised American National Standard.

Suggestions for improvement of the standard are welcome. They should be sent to the InterNational Electrical Testing Association, 3050 Old Centre Avenue, Suite 102, Portage, MI 49024.

## PREFACE

Specifying requisite levels of training, experience, and education for the evaluator of electrical power equipment is as important as the test procedure itself. The requirements herein parallel those of the National Skill Standards Board in Washington, DC, which promulgates skill levels for various occupations.

An Electrical Testing Technician (ETT) performs tests and inspections and evaluates the suitability of electrical power equipment and systems for the intended use.

Inherent in the determination of the serviceability of electrical equipment is the prerequisite that individuals performing these tests be capable of conducting the tests in a safe manner and with complete knowledge of the hazards involved. They must also evaluate the test data and make an assessment on the continued serviceability or non-serviceability of the specific equipment. The evaluation of service-aged equipment requires subjective assessment by the ETT.

Certification is a means for individuals to indicate to employers, co-workers, the general public, and others that they have met the standards of an impartial, nationally-recognized organization for the performance of specific technical tasks by virtue of their technical knowledge and experience.

## NETA STANDARD FOR CERTIFICATION OF ELECTRICAL TESTING TECHNICIANS

### 1. SCOPE

- 1.1 This standard establishes minimum requirements for qualification and certification of the electrical testing technician (ETT).
- 1.2 This standard details the minimum training and experience requirements for electrical testing technicians and provides criteria for documenting qualifications and certification.
- 1.3 This standard details the minimum qualifications for an independent and impartial certifying body to certify electrical testing technicians.

### 1. DEFINITIONS

The definitions in this standard are intended to clarify the meaning of terms used in this standard, as they apply to this standard, and only to this standard. No broader application of these definitions is implied.

#### **Annex**

Supplementary information which is mandatory to this standard.

#### **Appeal**

Request by applicant, candidate, or certified person for reconsideration of any adverse decision made by the certification body related to his/her desired certification status.

#### **Appendix**

Supplementary information which is informational but not mandatory to this standard.

#### **Candidate**

Individual who does not hold a current and valid certificate but may be involved in a certification system as an applicant or examinee.

#### **Certificant**

Individual who holds a current and valid electrical testing technician (ETT) certificate.

#### **Certification Body (Certifying Body)**

Organization that meets the criteria as outlined in this standard for offering an electrical testing technician (ETT) certification program.

#### **Certification System**

System that has its own rules of procedure and management for carrying out certification.

#### **Certification Element**

An area of job performance on which a candidate for certification will be tested by written examination.

#### **Certification Process**

The process by which a third party provides written assurance that a person's competence conforms to specified requirements.
