AMERICAN NATIONAL STANDARD

This American National Standard is one of more than 10,000 standards approved as American National Standards by the American National Standards Institute. On 24 August 1966, the ASA was reconstituted as the USA Standard Institute; on October 1969, the USASI changed its name to the American National Standards Institute. Standards formerly designated as ASA or USASI are now designated as ANSI Standards. There is no change in their index identification or technical content.

An American National Standard implies a consensus of those substantially concerned with its scope and provisions. An American National Standard is intended as a guide to aid the manufacturer, the consumer and the general public. The existence of an American National Standard does not in any respect preclude anyone, whether they have approved the standard or not, from manufacturing, marketing, purchasing or using products, processes or procedures not conforming to the standard. An approved ANSI Standard does not constitute or indicate a warranty of any sort, express or implied, including but not limited to a warranty or representation as to quality, merchantability or fitness for a particular use or purpose. American National Standards are subject to periodic review and users are to obtain the latest editions. Producers of goods made in conformity with an American National Standard are encouraged to state on their own responsibility in advertising, promotional material or on tags or labels that the goods are produced in conformity with particular American National Standards.

NOTICE: An approved ANSI standard does not express or imply any judgment, certification or endorsement of or with respect to, the safety, design or performance of any product, component, or its use.

NFPA does not examine, investigate, test, recommend, or certify the design, use or safety of any product or component, even those which may incorporate one or more ANSI standards. Approved ANSI standards therefore have no application to and do not express or imply any recommendation, representation or warranty, with respect to the safety, design, use, performance, or functional interchangeability of components or products which incorporate ANSI standards.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken to reaffirm, revise, or withdraw this standard no later than five (5) years from the date of publication. Information on this and other FLUID POWER standards may be obtained by calling or writing the National Fluid Power Association, 3333 North Mayfair Road, Milwaukee, WI 53222-3219, (414) 778-3344.

Suggestions for improvement gained in the use of this standard will be welcome. They should be sent to the National Fluid Power Association, 3333 North Mayfair Road, Milwaukee, WI 53222-3219.

Any part of this standard may be quoted. Credit lines should read: Extracted from the national industry standard ***Hydraulic fluid power – Cylinders ports – SAE straight thread O-ring and four-bolt flange ports – ISO straight thread O-ring and four-bolt flange ports – Heavy duty and light duty square head tie rod cylinders, ANSI/(NFPA)T3.6.54 R1-1997 (R2004).***

Foreword

This Foreword is not part of American National Standard *Hydraulic fluid power — Cylinder ports — SAE straight thread O-ring and four-bolt flange ports — ISO straight thread O-ring and four-bolt flange ports — Heavy duty and light duty cylinders*, ANSI/(NFPA)T3.6.54 R1-1997 (Revision of ANSI/B93.75M-1987).

At the T3.6 Cylinders meeting on 24 March 1993 it was decided to update this documents reference section. Gregory Pesch (Hanna Corp.) agreed to serve as Project Chairman. All members of T3.6 were included in the Project Group. The TSP was approved by the Technical Board at their 20 May 1993 meeting.

At the T3.6 meeting on 18 August 1993 the Project Group agreed that after the SAE reference number was updated by project Chairman Pesch, the document should be sent out for General Review.

The document was updated and a few minor editorial changes were made. The document was sent out for General Review on 25 October 1993. The General Review closed with comments from four companies.

At the 9 February 1994, T3.6 meeting, the title of the document was changed from *Hydraulic fluid power — Cylinder ports — SAE straight thread O-ring and four-bolt flange ports — Heavy duty and light duty cylinders*. The new title of the document is *Hydraulic fluid power — Cylinder ports — SAE straight thread O-ring and four-bolt flange ports — ISO straight thread O-ring and four-bolt flange ports — Heavy duty and light duty cylinders*.

The Project Group revised the document and at their 21 September 1994 meeting voted to send the document out for Second General Review. The document was sent out for Second General Review on 20 October 1994. The Second General Review closed with comments from two companies. Project Chairman Pesch wrote to the commentators on 9 February 1995 and both signed off by 16 February 1995. Headquarters received the revised document from Project Chairman Pesch on 13 February 1995.

T3.6 met on 8 February 1995 and voted to put this document on the Technical Board agenda for approval to Ballot. This document was approved for Ballot at the 13 April 1995 Technical board meeting.

This document was sent out for Ballot on 17 April 1995. Balloting closed with two negative comments. Both negative commentators asked that the document be changed to metric dimensions. At the 11 April 1996 Technical Board meeting Donald Selke reviewed the history of this document. At the General Review stage it was asked that metric units be added. This is an Inch document, however, the committee added the units. At the Ballot stage the committee was asked to delete the original U.S. units. The committee believes that since this is an inch document, the U.S. units should be retained. The Technical Board agreed with the T3.6 Committee and approved the document with the editorial changes from the two commentators to be added.

The updated document was received at Headquarters on 21 March 1997.

Project Group members who developed this standard:

Lido Boni
Project Chairman
Parker Hannifin Corp.

Gregory Pesch[†]
Project Chairman & Section Secretary
Hanna Corp.

Donald Selke
Section Chairman
Sheffer Corp.

E. Wayne Hays
Section Vice Chairman
Bimba Mfg. Co.

Paul Schacht
Technical Auditor
Robert Bosch Fluid Power

Jean M. Flesch
Technical Coordinator
National Fluid Power Association

Shirley C. Seal
Manager of Standards Development
Industry/National
National Fluid Power Association

[†] Deceased

On 31 March 1997 ANSI/(NFPA)T3.6.54 R1-19xx was submitted to ANSI Committee B93 for Ballot.

The membership roster of Standards Committee B93 at the time of Ballot:

Jack C. McPherson
Chairman

Daniel B. Shore
Vice Chairman

Shirley C. Seal
Secretary

American Society of Agricultural Engineers
W. L. Snyder

The Association for Manufacturing Technology
Anthony Bratkovich

Compressed Air & Gas Institute
John Wiskamp
John Addington (alternate)

Fluid Controls Institute, Inc.
Jude Pauli
John Addington (alternate)

Fluid Power Society
Probir K. Chatterjea
Art DesMarais III
Greg Gordon
Ray Hanley
Bernard Larson
Paul Prass (alternate)

N. Pliny Smith
James J. Staczek

Fluid Sealing Association
Stephen B. Chapman
Robert Ecker (alternate)

Material Handling Institute
Jack C. McPherson

National Fluid Power Association
John Berninger
David Prevallet
Paul Schacht
William Wilkerson

US Department of Defense
Wayne K. Wilcox

Company Members
Dennis Bonacorsi
John Welker (alternate)
Logan Mathis

Individual Members
John Eleftherakis
Russ Henke
Richard Pettibone
A. O. Roberts
Daniel B. Shore
Vince Torrusio
Jack Walrad
Tom Wanke
James C. White
Frank Yeaple

On 27 May 2004, ANSI/(NFPA)T3.6.54 R1-1997 was submitted to ANSI Committee B93 for ballot to reaffirm. Balloting closed on 12 July 2004 with no negative votes.

ANSI/(NFPA)T3.6.54 R1-1997 (R2005) was approved by ANSI's Board of Standards Review on 15 December 2004.

The membership roster of Standards Committee B93 at the time of ballot:

Jack C. McPherson
Chair

Jenna Wetzel
Secretary

American Society of Agricultural Engineers
Scott Cedarquist

Compressed Air & Gas Institute
John Addington

Eaton Corporation
Jerry Carlin

Fluid Power Society
Clayton W. Fryer

Fluid Sealing Association
Robert Ecker

General Motors
R. Joe Nunley

Material Handling Institute
Jack C. McPherson

Milwaukee School of Engineering
Thomas S. Wanke

Motion Industries
Larry Kuziak

National Fluid Power Association
John F. Berninger

Individual Members
Dennis Bonacorsi

Individual Members
John Montague
Albert Roberts
Paul Schacht
Jack Walrad
James C. White
Wayne K. Wilcox

Hydraulic fluid power — Cylinder ports — SAE straight thread O-ring and four-bolt flange ports — ISO straight thread O-ring and four-bolt flange ports — Heavy duty and light duty square head tie rod cylinders

0 Introduction

In fluid power systems, power is transmitted and controlled through a fluid (liquid or gas) under pressure within an enclosed circuit.

One component of such systems is the fluid power cylinder. This is a device which converts power into linear mechanical force and motion. It usually consists of a movable element, such as a piston and piston rod, plunger, or ram operating within a cylindrical bore.

The square head cylinder is a specific design initially developed for industrial (in plant) use. It is manufactured and sold as an interchangeable component by a majority of suppliers. Standardization of O-ring port sizes in this document is further recognition of this interchangeability.

1 Scope

1.1 This standard includes recommended sizes of SAE and ISO straight thread O-ring and four-bolt flange ports in NFPA standard heavy duty and light duty hydraulic cylinders.

1.2 This standard intends to:

- encourage the use of SAE O-ring sealed ports;
- promote cylinder interchangeability by establishing uniform O-ring port recommendations.

1.3 This standard only applies to the dimensional criteria of products manufactured in conformance with this standard. It does not apply to their functional characteristics.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this document. At the time of publication, the editions indicated were valid. All documents are subject to revision, and parties to agreements based on this document are encouraged to investigate the possibility of applying the most recent editions of the documents indicated below. NFPA maintain registers of currently valid NFPA/ANSI standards.

ANSI/B93.2-1986, *Fluid power systems and products — Glossary.*

ANSI/(NFPA)T3.6.7 R2-1996, *Fluid power systems and products — Square head industrial cylinders — Mounting dimensions.*

ISO 6149-1-1993, *Connections for fluid power and general use — Ports and stud ends with ISO 261 threads and O-ring sealing — Part 1: Port with O-ring in truncated housing.*

ISO 6162:1994, *Hydraulic fluid power — Four-screw split-flange connections for use at pressures of 2,5 MPa to 40 MPa (25 bar to 400 bar) — Type I metric series and type II inch series.*

SAE J1926-1:1988, *Specification for Straight Thread O-ring Boss Port.*

SAE J846-1989, *Coding System for Identification of Fluid Conductors and Connectors.*

SAE J518-1993, *Hydraulic Flanged Tube, Pipe, and Hose Connections, Four-Bolt Split Flange Type.*
