Disclaimers¹

NSF, in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. The opinions and findings of NSF represent its professional judgment. NSF shall not be responsible to anyone for the use of or reliance upon this Standard by anyone. NSF shall not incur any obligation or liability for damages, including consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this Standard.

NSF Standards provide basic criteria to promote sanitation and protection of the public health.

Participation in NSF Standards development activities by regulatory agency representatives (federal, local, state) shall not constitute their agency's endorsement of NSF or any of its Standards.

Preference is given to the use of performance criteria measurable by examination or testing in NSF Standards development when such performance criteria may reasonably be used in lieu of design, materials, or construction criteria.

The illustrations, if provided, are intended to assist in understanding their adjacent standard requirements. However, the illustrations may not include **all** requirements for a specific product or unit, nor do they show the only method of fabricating such arrangements. Such partial drawings shall not be used to justify improper or incomplete design and construction.

Unless otherwise referenced, the annexes are not considered an integral part of NSF Standards. The annexes provided as general guidelines to the manufacturer, regulatory agency, user, or certifying organization.

¹ The information contained in this Disclaimer is not part of this American National Standard (ANS) and has not been processed in accordance with ANSI's requirements for an ANS. Therefore, this Disclaimer may contain material that has not been subjected to public review or a consensus process. In addition, it does not contain requirements necessary for conformance to the Standard.

Foreword²

The purpose of this Standard is to establish minimum materials, design and construction, and performance requirements for components, products, equipment and systems, related to public and residential recreational water facility operation.

If a value for measurement is followed by a value in other units in parenthesis, the second value may be only approximate. The first stated value is the requirement.

In this edition of NSF/ANSI 50 the following revisions were incorporated:

Issue 47 – Valves

An updated Section 7 eliminates “Multiport” and includes cyclic and burst pressure testing.

Issue 49 – Spas

This issue added requirements for factory engineered and portable spas and swim-spas to NSF/ANSI 50. The change enables comprehensive evaluation and testing of spas to assure users of product performance, quality, and safety. This information is in section 20.

Issue 75 – Ozone

The first addition is to address a system evaluation for ozone equipment. The second purpose is the addition of cryptosporidium validation of ozone equipment in the Recreational Water industry. These changes are in section 13 and Annex H.

Issue 78 – Fittings

This includes evaluation criteria for increasing the safety of water return fittings, perimeter grating and overflows, testing of pool deck drain fittings, and to update the normative references. These changes are shown in section 1, 2, and 21.

Issue 86 – Water Quality Testing Devices

This issue updates WQTD test methods and provided additional clarity to the language in annex O.

Issue 87 – Output Repeatability

The text replaces the current repeatability variance for each output measurement to a 10% limit on the average of the 5 repeatability measurements at both 50% and 100% output in Annex G, G.3.

Issue 88 – Non-integral Strainers

This issue revises section 7 concerning non-integral strainers, specifically requirements for installation instructions and data plates.

Issue 94 – Annex A

This change revises Annex A (informative) to Annex A (normative) as it was in err changed in a previous version.

² The information contained in this Foreword is not part of this American National Standard (ANS) and has not been processed in accordance with ANSI's requirements for an ANS. Therefore, this Foreword may contain material that has not been subjected to public review or a consensus process. In addition, it does not contain requirements necessary for conformance to the Standard.

Pump Annex – Informational

This annex provides guidance on variable-Speed pumps recommendations for installation and operation.

Spa Annex – Informational

This annex details recommended water quality maintenance for spas.

Annex H

Section H.4.9, Quality Control, will be proposed for ballot to be removed in the next publication. You may disregard this section in the current version of NSF/ANSI 50.

Graphics

Several graphics were recreated with no updates to allow for ease of editing; other graphics that were revised have been updated to the format allowing editing.

Suggestions for improvement of this Standard are welcome. This Standard is maintained on a Continuous Maintenance schedule and can be opened for comment at any time. Comments should be sent to Chair, Joint Committee on Recreational Water Facilities at standards@nsf.org, or c/o NSF International, Standards Department, PO Box 130140, Ann Arbor, MI 48113-0140, USA.

NSF/ANSI Standard

Equipment for Swimming Pools, Spas, Hot Tubs and other Recreational Water Facilities

Evaluation criteria for materials, components, products, equipment and systems for use at recreational water facilities

1 General

1.1 Scope

This Standard covers materials, components, products, equipment and systems, related to public and residential recreational water facility operation.

1.2 Variations in design and operation

A component varying in design and/or operation may qualify under this Standard. Appropriate tests and investigations shall indicate that the component performs as well as components conforming to this Standard. Such components shall meet the requirements for materials, finishes, and construction in this Standard.

1.3 Alternate materials

If specific materials are mentioned, other materials equally satisfactory from the standpoint of public health may be permitted.

1.4 Standard review

A complete review of this Standard shall be conducted at least every five years. These reviews shall be conducted by representatives from the industry, public health, and user groups, or agencies of the NSF Joint Committee on Recreational Water Facilities.

1.5 Normative references

The following documents contain provisions that, through reference in this text, constitute provisions of this Standard. At the time of publication, the indicated editions were valid. All standards are subject to revision, and parties are encouraged to investigate the possibility of applying the recent editions of the standards indicated below. The most recent published edition of the document shall be used for undated references.
