American National Standard

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword (This foreword is not part of American National Standard ANSI B175.3-2003.)

This standard is the first revision of *American National Standard Grass Trimmers and Brushcutters*, ANSI B175.3-1997. The first edition of this standard was developed under the auspice of the Portable Power Equipment Manufacturers Association (PPEMA) and published in 1997.

In 2002, PPEMA discontinued operations and the Outdoor Power Equipment Institute (OPEI) became the secretariat for this standard since some OPEI member companies manufacture grass trimmers and brushcutters. The present revision of this standard was prepared by the ANSI B175.3 Committee on Trimmers and Brushcutters as part of OPEI's continuing work on standards.

A summary of the principal changes included in this revision is as follows:

- "Convertible unit" in the Scope was clarified.
- The definition for Operator/Cutting Position was modified to account for the possibility of the operator being on the opposite side of the machine depicted in Figure 1.
- Section 6.1, Engine Stopping Device, was modified to include requirements for both blade capable and non-blade capable units.
- Section 7.1, Cutting Attachment Retention, was updated.
- A new section, Section 8, Product Integrity, was added.
- Section 10.3, Vibration Test Conditions, was changed to require the manufacture to test the unit with the cutting attachment that the manufacturer determines will create the highest vibration level.
- Section 13.1.2 (distance between the two handles) was modified and now includes a requirement for on-product labeling if the distance is adjustable to less than ten (10) inches.
- Section 13.2, Barrier(s) and Restrictive Harness(es), was modified to state "a barrier between the operator and cutting attachment...", whereas in the prior version the barrier location was implied.
- Figures 1 and 2 were updated.

Consensus for this standard was achieved by use of the Canvass Method.

There are two annexes in this standard. Annexes A and B are informative and are not considered part of this standard.

Suggestions for improvements to this standard are welcome. They should be sent to the Outdoor Power Equipment Institute, 341 South Patrick Street, Alexandria, VA 22314.

The following organizations recognized as having an interest in the standardization of safety requirements for trimmers and brushcutters were contacted prior to the approval of this revised standard. Inclusion in the list does not necessarily imply that the organization concurred with the submittal of the proposal to ANSI.

American Society of Agricultural Engineers
Capro, Inc.
Echo, Inc.
North American Equipment Dealers Association
Piedmont Technical Associates, Inc.
Power Tool Institute
Solo, Inc.
Southland Engineering Systems
Stihl, Inc.
Texas Tech University
US Consumer Product Safety Commission
US Testing Company, Inc.
Underwriters Laboratories, Inc.

American National Standard
for Outdoor Power Equipment –

Grass Trimmers and Brushcutters – Safety Requirements

1. Scope and Purpose

1.1 Scope

The requirements of this Standard¹ apply to:

- a) portable hand-supported gasoline powered grass trimmers² intended for use with flexible nonmetallic line, or other types of nonmetallic cutting attachments, and
- b) portable, hand-supported, gasoline-powered brushcutters intended for use with cutting blades and other cutting attachments.

NOTE - If a grass trimmer is marketed by the manufacturer as convertible to a brushcutter, then the converted unit shall comply with requirements for brushcutters and vice-versa.

A convertible unit may be marketed as a grass trimmer or a brushcutter without including the devices required for conversion in the packaging, provided the operator manual clearly addresses the need to acquire and use the required conversion devices and the manufacturer makes such devices available as optional equipment.

1.2 Purpose

The purpose of this standard is to establish minimum manufacturer requirements to reduce the risk of injury associated with the use of portable, hand-supported, gasoline-powered grass trimmers and brushcutters.

2 Normative References

The following standards contain provisions which, through reference in this text, constitute provisions of this American National Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this American National Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below.

¹⁾ Metric conversions are shown in brackets and are included for information only.

²⁾ Trimmers and Brushcutters with back mounted power units are not covered by this standard.
