American National Standard

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword (This foreword is not part of American National Standard ANSI/OPEI B175.1-2012.)

This standard sets forth the minimum safety requirements for internal combustion engine-powered hand-held chain saws. These requirements have resulted from years of standards development efforts by the OPEI B175 Standards Committee. The original standard was approved in 1979 and revised in 1983, 1985, 1991, and 2000.

This standard contains 17 annexes, 12 of which are informative. Annexes B.2, C, D, M, and N.1 are normative and are considered part of this standard.

Suggestions for improvements of this standard are welcome. They should be sent to the B175.1 Standards Committee, c/o OPEI, 341 South Patrick Street Alexandria, VA 22314.

The following organizations recognized as having an interest in the standardization of safety requirements for internal combustion engine-powered hand-held chain saws were contacted prior to the approval of this revised standard. Inclusion in the list does not necessarily imply that the organization concurred with the submittal of the proposed standard to ANSI.

Dr. Holger Lochmann, Chairman

General Interest:

Tree Care Industry Association (Peter Gerstenberger)
Underwriters Laboratories (Nicolette Allen)
US CPSC (John Murphy)
USDA (Trevor Maynard)

Users/Consumers:

Aero-Flex Technologies, Inc. (Vince Morabit)
CSA (Dave Shanahan)
North American Equipment Dealers Association (Michael Williams)
Ken Andersen
Arv Hille

Producers:

Dolmar GmbH (Maria Tittel)
ECHO, Inc. (Rob Stegall)
Husqvarna Professional Products, Inc. (Ronnie Goldman)
MTD Products Inc. (Dennis Lamberty)
STIHL, Inc. (John Foster)

American National Standard
for Outdoor Power Equipment –

Internal Combustion Engine-Powered Hand-Held Chain Saws – Safety and Environmental Requirements

1 Scope and purpose

1.1 Scope

The requirements of this standard apply to internal combustion engine-powered hand-held chain saws and replacement saw chains for use primarily in cutting wood.

This standard shall be applied to new products within 2 years of the publication date and manufacturers may apply this standard to existing products.

NOTE – Metric units are included for information only.

1.2 Purpose

The purpose of this standard is to establish safety and environmental requirements for internal combustion engine-powered hand-held chain saws and replacement saw chains.

2 Normative References

The following standards contain provisions which, through reference in this text, constitute provisions of this American National Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this American National Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below.

ANSI S1.4-1983 (R2006), *Specification for sound level meters*

ISO 1431-1: 2004, *Rubber, vulcanized or thermoplastic – Resistance to ozone cracking – Part 1: Static and dynamic strain testing*

ISO 6533: 2001, *Forestry machinery – Portable chain saw front hand guard – Dimensions and clearances*

ISO 6534: 2007, *Forestry machinery – Portable chain saw hand guards – Mechanical strength*

ISO 6535: 2008, *Portable chain saws – Chain brake performance*

ISO 7914: 2002, *Portable chain saws – Minimum handle clearance and sizes*
