American National Standard

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute

Foreword (This foreword is not part of American National Standard ANSI/OPEI B175.2-2012 (R2019).)

This is a reaffirmation of the ANSI/OPEI B175.2-2012 *American National Standard for Outdoor Power Equipment - Internal Combustion Engine-Powered Hand-Held and Backpack Blowers and Blower-Vacuums - Safety Requirements and Performance Testing Procedures*. This standard was developed under the auspices of the Outdoor Power Equipment Institute (OPEI).

This reaffirmation includes the following non-substantive updates:

- Editorial incorporation of ANSI/OPEI B175.2-2012 A1-2014 amendments into the body of the standard;
- General editorial corrections and clarifications, such as spelling, unit abbreviations, figure references, redundancy, section headers and contact information;
- Section 2: Clarification regarding the intended use of dated and undated normative references;
- Section 4.4.1: Tolerances for the ceramic prism used for guard strength testing updated to reflect commercially available test prisms and harmonize with ISO;
- Section 8.3: Clarification that the section requirements are intended to cover the fuel feed line;
- Section 9.1: Clarification that the implied "highest sound pressure level" is for the measurement at the operator's ear;
- Section 12.1: Required (verbatim "or other suitable wording") hazard warnings (b) - (e) reworded in the form of recommended language.

This standard contains four normative annexes, which are all considered part of this standard.

Consensus for this standard was achieved by use of the Consensus Body (Canvass) Method.

Suggestions for improvements to this standard are welcome. They should be sent to the Outdoor Power Equipment Institute, 1605 King Street, Alexandria, VA 22314.

The following organizations recognized as having an interest in the standardization of requirements for blowers and blower-vacuums were contacted prior to the approval of this standard. Inclusion in the list does not necessarily imply that the organization concurred with the submittal of the proposal to ANSI.

Robert Stegall, Chairman

Consensus Body (Canvass) List:

Users:

George Brandon
John Dehaven
Larry Will

General Interest:

Aero-Flex Technologies (Vince Morabit)
CSA (Dave Shanahan)
USDA Forest Service/San Dimas Technology & Development (Ralph Gonzales)

Producers:

ECHO (Robert Stegall)
Stihl (Maria Pawlowski)
Techtronic Industries Power Equipment (David Anderson)

American National Standard
for Outdoor Power Equipment –

Internal Combustion Engine-Powered Handheld and Backpack Blowers and Blower-Vacuums – Safety Requirements and Performance Testing Procedures

1. Scope and Purpose

1.1. Scope

The requirements of this standard apply to handheld and backpack internal combustion engine-powered blowers and blower-vacuums. This standard does not apply to ride-on, towed, or walk-behind units. This standard does not apply to electrically powered units.

This effective implementation date of this standard shall be two (2) years after the publication date and shall apply to all products built after that date. Manufacturers may also comply with this standard anytime after the publication date.

NOTE – The units in this standard are given in metric. English units are included in parenthesis for information only.

1.2. Purpose

The purpose of this standard is to establish manufacturer requirements to reduce the risk of injury associated with the use of handheld and backpack internal combustion engine-powered blowers and blower-vacuums. This standard may also be used to measure bystander sound pressure levels at 15 meters (50 feet).

2. Normative References

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ANSI/ASSE Z87.1-2003, *Practice for Occupational and Educational Personal Eye and Face Protection Devices*
