ANSI/SAIA A92.2 – 2015

for

Vehicle-Mounted Elevating and Rotating Aerial Devices

American National Standards
Institute 11 West 42nd Street New York, New York 10036
Date of Publication: July 7, 2015

Effective Date: June 2016

This Standard was approved by the American National Standards Institute on

The design and manufacturing requirements of this standard apply to all aerial platforms manufactured on or after the effective date. All other provisions of this standard apply to both new and existing units delivered by sale, lease, rental or for any form of beneficial use on or after the effective date.

The effective date is established by the standards developer and not by the American National Standards Institute.

This standard was developed under procedures accredited as meeting the criteria for American National Standards. The Consensus Committee that approved the standard was balanced to ensure that individuals from competent and concerned interests have had an opportunity to participate. The proposed standard was made available for public review and comment which provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public at large.

The Scaffold & Access Industry Association, Inc. (SAIA) does not “approve,” “rate,” or “endorse” any item, construction, proprietary device or activity.

The Scaffold & Access Industry Association, Inc. (SAIA) does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to ensure anyone utilizing a standard against liability for infringement of any applicable Letters Patent, nor does it assume any such liability. Users of this standard are expressly advised that the determination of the validity of any such patent rights, and the risk of the infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated within the industry is not to be interpreted as government or industry endorsement of this standard.

The Scaffold & Access Industry Association, Inc. (SAIA) accepts responsibility for only those interpretations issued in accordance with governing ANSI Essential Requirements, which preclude the issuance of interpretations by individual volunteers.
ANSI/SAIA
A92.2-2015

AMERICAN NATIONAL STANDARD
for VEHICLE-MOUNTED ELEVATING
and ROTATING AERIAL DEVICES

Secretariat
Scaffold & Access Industry Association, Inc.

Approved June 26, 2016
American National Standards Institute, Inc.
AMERICAN NATIONAL STANDARD

Approval of an American National Standard requires verification by ANSI that the requirements for
due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial
agreement has been reached by directly and materially affected interests. Substantial agreement means
much more than a simple majority, but not necessarily unanimity. Consensus requires that all views
and objections be considered and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any
respect preclude anyone, whether he has approved the standard or not, from manufacturing, marketing,
purchasing, or using products, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances
give an interpretation of any American National Standard. Moreover, no person shall have the right or
authority to issue an interpretation of an American National Standard in the name of the American
National Standards Institute. Requests for interpretations should be addressed to the secretariat or
sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn any time. The
procedures of the American National Standards Institute require that action be taken to reaffirm, revise,
or withdraw this standard no later than five years from the date of approval. Purchasers of American
National Standards may receive current information on all standards by calling or writing the
American National Standards Institute.

FOREWORD

This foreword is not part of American National Standard for vehicle-mounted aerial devices, ANSI/SAIA A92.2-2015.

This standard is one of a series on aerial platforms developed under the committee procedures of the American National Standards Institute. The A92 standards committee was organized by the Institute in 1948. The Scaffold & Access Industry Association, Inc. serves as Secretariat.

The primary objective of this standard is to prevent accidents associated with the use of vehicle-mounted aerial devices by establishing requirements for design, manufacture, installation, maintenance, performance, use and training.

Interpretations and Suggestions for Improvement

All inquiries requesting interpretation of the Committee’s approved American National Standards must be in writing and directed to the Secretariat. The A92 Committee shall approve the interpretation before submission to the inquirer. No one but the A92 Committee is authorized to provide any interpretation of this standard.

The A92 Committee solicits comments on and criticism of the requirements of the standards. The standards will be revised from time to time where necessary or desirable, as demonstrated by the experience gained from the application of the standards. Proposals for improvement of this standard will be welcome. Proposals should be as specific as possible, citing the paragraph number(s), the proposed wording, and a detailed rationale for the proposal, including any pertinent documentation.

All requests for interpretation and all suggestions for improvement shall be forwarded in writing to the ASC A92 Committee, c/o Secretariat ~ Scaffold & Access Industry Association, 400 Admiral Boulevard, Kansas City, MO 64106.

This Standard was processed and approved for submittal to ANSI by Accredited Standards Committee Aerial Platforms, A92 Aerial Work Platforms. The ASC A92 committee’s approval of the standard does not necessarily imply that all committee members voted for its approval. At the time the ASC A92 committee approved this standard, the A92 Aerial Work Platforms Committee had the following members:

1. Scope, Purpose, Requirements, and Application

1.1 Scope.

1.1.1 Equipment Covered. This standard relates to the following types of vehicle-mounted aerial devices:
(1) Extensible boom aerial devices.
(2) Aerial ladders.
(3) Articulating boom aerial devices.
(4) Vertical towers.
(5) A combination of any of the above. The vehicle may be a truck, a trailer, or an all-terrain vehicle.

1.1.2 Equipment Not Covered. This standard does not apply to the equipment listed below:
(1) Non self-propelled elevating aerial platforms such as those covered in American National Standard for Manually-Propelled Elevating Platforms ANSI/SAIA A92.3-2006 (R2014).
(2) Self-propelled elevating aerial platforms having a platform that can be positioned completely beyond the base such as those covered in American National Standard for Boom-Supported Elevating Work Platforms, ANSI/SAIA A92.5-2006 (2014).
(3) Self-propelled elevating aerial platforms having a platform that cannot be positioned completely beyond the base such as those covered in American National Standard for Self-Propelled Elevating Work Platforms, ANSI/SAIA A92.6-2006 (R2014).
(5) Vehicle-Mounted Bridge Inspection and Maintenance Devices such as those covered in ANSI/SIA A92.8-2006 (R2011).
(6) Mast Climbing Work Platforms such as those covered in ANSI/SIA A92.9-2011.
(7) Transport Platform such as those covered in ANSI/SAIA A92.10-2009 (R2014).
(8) Equipment such as that covered in ANSI/ASME A120.1- 2006 Safety Requirements for Powered Platforms for Building Maintenance.
(9) Vertically adjustable equipment used primarily to raise and lower materials and equipment from one elevation to another such as that covered in American National Standards in the A17 and B56 series.
(13) Personnel carrying attachments or personnel platforms attached to or suspended from cranes built to the ANSI/ASTM B30 Standards. These excluded items are referred to in ANSI/ASTM B30.23, which provides guidance for the use of such apparatus on cranes.

1.2 Purpose. This standard applies to the establishment of criteria for design, manufacture, testing, inspection, installation, maintenance, use, training, and operation of vehicle-mounted aerial devices, primarily used to position personnel, installed on a chassis to achieve the following objectives:
(1) Prevention of personal injuries and accidents.
(2) Uniformity in ratings.
(3) Understanding by manufacturers, dealers, brokers, installers, lessees, lessors, maintenance personnel, operators, owners, and users of their respective responsibilities.

1.3 Requirements. The requirements of this standard shall be met or exceeded.

1.4 Application. The design and manufacturing requirements of this standard apply to all aerial devices manufactured on or after the effective date. All other provisions of this standard apply to both new and existing units delivered by sale, lease, rental or by any other form of beneficial use on or after the effective date.
